#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 42-44 are rejected under 35 U.S.C. 102(e) as being anticipated by Davidson et al (US 6,879,627).

#### Claim 42.

Davidson et al discloses a method of performing channel phase estimation in a wireless communication system, comprising:

performing non-iterative estimation of channel phase based on received symbols to obtain a set of hypothesis for the channel phase, wherein the set of hypothesis is a subset of all possible hypothesis for the channel phase (see Fig.11 and col.19, lines 13-35) ; and

performing iterative data-directed estimation of the channel phase based on the set of hypothesis and received data symbols to obtain a final channel phase estimate selected from among the set of hypothesis (see Fig.12 and col.19, line 36 – col.20, line 24).

#### Claim 43.

Davidson et al discloses the received signal is a QPSK signal and the set of M hypothesis includes M phases separated by  $2\pi/M$  since each phase is  $k \cdot 22.5^\circ$ . see col. 19, line 15.

Art Unit: 2611

Claim 44.

Fig. 14 shows performing iterative detection and decoding for the received data symbols using the set of hypothesis for the channel phase (156).

*Allowable Subject Matter*

3. Claims 1-42, 45-53 are allowed.
